

TYPICAL SETUP: THE WOODEN LIGHTBOX

contact: alex mackenzie email alexgmackenzie@gmail.com

Other Notes:

- room must be **pitch black** > all lights, signage or hall-way lights should be extinguished.
- image size will vary based on throw: image is dim, and becomes dimmer the further back the projector sits from the screen - bear this in mind.
- if room has non-moveable seats with no centre aisle, table must be able to straddle chairs, be stable (or screwed down), and allow for operation space.
- power is required for amp/mixer (supplied by house), audio feed (ipod-type device), and projector.
- no chairs behind projector setup as the projector is operated when standing up and operator will block screen view for these seats.
- this show functions optimally in an intimate, dark space with a small screen image - gallery, microcinema, moveable seats best.
